

The fifth annual **UX RESEARCH TOOLS MAP FROM USER INTERVIEWS**—an illustrated guide to the ever-changing world of user research software—is intended to both awe (so many tools and features!) and to educate.

This year's map contains nearly 400 logos (a staggering number), each plotted according to their core use case to help you visualize the relationship between tools, as well as the volume of solutions available for any given UXR need.

In this **Appendix**, you'll find all the tools on the map listed in alphabetical order next to their logos.

Want to view the full list as a spreadsheet? Your download pack includes an Excel file with every tool. You can also [access the list as a Google Sheet here](#).
